Serena Stelitano | XR, AR, VR, Digital Art & Immersive Storytelling

Public Record & SEO Master Document · 1996–2026

Working publication master for a canonical web presence, professional archive, and search-engine entity disambiguation.

Primary identity: Serena Stelitano · Artistic/professional aliases: Serste; SeLoPhlee · Studio: bottega di Serste

LinkedIn: [linkedin.com/in/serena-stelitano](https://www.linkedin.com/in/serena-stelitano)

1. Purpose and publication standard

This document is the editorial and evidence master for building a durable public record around Serena Stelitano's work, with particular emphasis on XR, immersive storytelling, immersive journalism, interactive data visualization, spatial media, WebXR/AR, virtual worlds and game-based investigative storytelling. It is designed to become the source of truth from which a public website, long-form biography, project case studies, structured data and search metadata can be produced.

The document separates current professional positioning from independently verifiable public record. Claims are strengthened by contemporary project documentation, first-party institutional credits, external coverage, platform records and recovered web archives. Internal Drive material is used to establish chronology and scope but should not automatically be published verbatim.

Evidence rule: Where public corroboration is incomplete, the text labels the item as partially grounded or pending corroboration rather than converting an internal record into an external fact.

2. Canonical identity and SEO entity definition

Field	Canonical value
Canonical name	Serena Stelitano
Professional aliases / identity signals	Serste; SeLoPhlee (historical artistic alias/signature); bottega di Serste
Current portfolio positioning (2026)	Director, XR Products & Immersive Storytelling
Externally documented CCIJ roles	Metaverse Designer; CCIJ Metaverse & Game Designer; Metaverse Design credit
Primary field	XR / Extended Reality and Immersive Storytelling
Adjacent fields	Immersive journalism; investigative journalism; interactive data visualization; AR/WebXR; spatial storytelling; game design; virtual exhibitions; digital art / Web3
Canonical LinkedIn	https://www.linkedin.com/in/serena-stelitano
Critical disambiguators	Serste; bottega di Serste; CCIJ; XR; immersive storytelling; immersive journalism; Fortnite UEFN; WebXR; Voxels; Spatial

Entity-disambiguation is essential because another professional with the same name is strongly indexed in cybersecurity and data protection. The public site should therefore pair “Serena Stelitano” consistently with the distinctive professional signals above, particularly in page titles, biographies, structured data, alt text, internal anchor text and external profiles.

Historic alias note: SeLoPhlee is a historical artistic alias used during Stelitano’s illustration and editorial-art period. The artist identifies SeLoPhlee as the signature used on the 2016 caricature “Andrea Camilleri, cassatina sulla terrazza a Marinella.” Wikimedia Commons independently verifies that work as an original by user SerStelitano and dates it to 12 October 2016; Stelitano’s Wikimedia user page also preserves the historic social handle @SeLoPhlee. For entity resolution and search, SeLoPhlee should be treated as an alternateName of the canonical Serena Stelitano entity, not as a separate person.

3. Search territory to establish

The objective is not merely to rank for the name. The public corpus should create a defensible association between Serena Stelitano and the professional topics that her documented work supports.

Name + field

Topic authority

- immersive investigative journalism
- XR investigative journalism
- AR data visualization journalism
- WebXR journalism
- Fortnite investigative journalism game
- game-based investigative storytelling
- metaverse investigative journalism
- immersive data visualization

These phrases should appear only where they accurately describe the work. The strategy is entity coherence and topical depth, not repetition for its own sake.

4. Canonical professional biography

Short biography

Serena Stelitano (also known as Serste, and historically as SeLoPhlee during her illustration period) is an Italian XR product director, immersive storyteller and multidisciplinary visual practitioner whose work connects investigative journalism, interactive data visualization, spatial media and game-based public experiences. Her practice developed from editorial illustration and collaborative digital art into blockchain-native participation, virtual exhibitions, immersive journalism and cross-platform XR systems. Since 2021, she has worked with the Center for Collaborative Investigative Journalism (CCIJ) on immersive investigations across Voxels, Spatial, AR/WebXR, Zappar and Fortnite UEFN. Public CCIJ records have described her as

Metaverse Designer, identified her as the leader of CCIJ's XR initiative, credited her with Metaverse Design on Democracy Deferred, and presented her as CCIJ Metaverse & Game Designer in connection with Data Vault Canyon.

Long biography

Stelitano's practice is best understood as a continuous movement from image-making toward systems of participation. Trained in visual art and cataloguing, she worked in editorial illustration, comics and visual interpretation before joining DADA's collaborative drawing ecosystem. DADA introduced a distributed model of authorship in which images were created through visual conversation rather than as isolated objects. Her participation in the 2017 Creeps & Weirdos collection placed her among early artists in a blockchain-native digital art project; DADA's official smart-contract repository identifies Serste as Serena Stelitano and records her DADA activity from 2016.

From 2019–2020 her work increasingly explored programmable, collective and spatial formats. Oracle, programmable fortune-teller used controllable layers and a participatory logic to turn a digital artwork into a changing public system. In 2020 she also began curating and building exhibitions in Voxels, using open virtual worlds as a publishing and exhibition medium. CCIJ's 2024 profile traces this progression and states that her collaboration with CCIJ began in 2021, where she expanded the same interests into XR and Web3 technologies for journalism.

By 2022–2023 the work had shifted decisively into immersive investigative storytelling. CCIJ transformed investigations into explorable virtual environments and data rooms, and a 2023 institutional statement described the initiative as "spearheaded by Serena Stelitano" and called her its leader. Her work moved beyond spatial display toward embodied data: Dreadlocks and Discrimination translated a discrimination survey into a Voxels experience combining three-dimensional charts and wearable elements, with VEZA explicitly crediting Stelitano for designing and building the virtual experience.

Democracy Deferred and Shield Your Vote expanded the practice from immersive exhibition toward game systems. Democracy Deferred officially credits Metaverse Design to Serena Stelitano, while later CCIJ material connects Shield Your Vote to the development of a Fortnite-based investigative experience. Data Vault Canyon, published in Fortnite, became an externally recognized journalism game; International Press Institute introduced Stelitano as CCIJ Metaverse & Game Designer in a session explaining its worldbuilding. In parallel, Forest Is Life / Puddle Placer AR translated land-surface-temperature analysis into an embedded WebXR/AR experience where readers can place data-derived microclimates into their surroundings.

The common thread across these phases is not a platform but a method: complex material is reorganized into a navigable system in which audiences can move, manipulate, inhabit or play the information. This positions Stelitano's work within XR product direction and immersive storytelling, with a particular concentration on investigative journalism, data-driven public experience and cross-platform narrative systems.

5. Professional trajectory: from image to interactive system

Period	Phase	Development
1996–2013	Visual foundations	Fine arts, composition, cataloguing, illustration and cultural interpretation establish visual narrative, archival and editorial skills.
2014–2019	Editorial and collaborative visual culture	Editorial illustration, comics, social/political images, DADA visual conversations and early blockchain-native collective authorship.
2019–2021	Programmable participation and virtual worlds	DADAGAN context, Oracle, virtual curation, Voxels and distributed cultural infrastructures shift the practice from image to system and space.
2021–2023	Immersive journalism	CCIJ collaboration; virtual investigations, immersive data rooms, Spatial/Voxels environments and AR experimentation.
2023–2025	XR data storytelling and game literacy	Dreadlocks and Discrimination, Democracy Deferred, Shield Your Vote, wearable data and multi-platform investigative experience design.
2025–2026	Game-based investigative storytelling	Forest Is Life / Puddle Placer AR; Data Vault Canyon in Fortnite UEFN; expansion toward persistent game worlds, XR products and public-facing data systems.

Early game & phygital precedents

Ucki: Diary of a Stone-age Boy (2016–2019). The educational publishing project extended into the *Pleistocene Fauna Memory Game / Kartenspiel Tiere Kiste*, developed as a **digital printable memory game** whose cards could be printed and materialized as a physical tabletop game. Illustrated Pleistocene fauna, visual taxonomy, downloadable/printable production and learning-through-play made it an early digital-to-physical, or phygital, component of the same Ucki educational ecosystem rather than an unrelated standalone product.

Oracle (2020). The programmable artwork also had printable and physical derivatives, extending a blockchain-native participatory system into a phygital format.

Andrea Grows (2021–2022). The interactive webcomic combined branching narrative, Web3 publishing, NFTs, QR-linked content, a DADA sketchbook and a physical collector box, creating a hybrid post-purchase publishing experience.

Why this matters. These projects document an early continuity between illustrated educational games, printable/physical extensions, interactive publishing and later AR, WebXR and game-based immersive journalism.

6. Flagship case studies

DADA / Creeps & Weirdos

Period: 2016–2017 onward

Field: Collaborative digital art / early blockchain-native culture

DADA's official smart-contract repository lists Serste (Serena Stelitano) among the artists of Creeps & Weirdos and records her first drawing on DADA in April 2016. The 2017 collection comprised 108 artworks by 30 artists and is documented by DADA as a decentralized rare-digital-art project. Forbes later featured a DADA visual conversation including Serste (Italy).

Why it matters in the practice: This phase establishes collective authorship, distributed participation, persistent digital identity and early networked art practice — concepts that later recur in immersive spaces and multiplayer storytelling.

Public record: https://github.com/powerdada/dada_sc · <https://www.forbes.com/sites/katmustatea/2018/07/15/can-blockchain-eliminate-the-myth-of-the-starving-artist/> · <https://powerdada.medium.com/dada-at-rare-af-3-6ca3d1a19b31>

TXU.TOTEM

Period: 2019–2020

Field: Collective programmable art / autonomous blockchain artwork

TXU.TOTEM is a five-person collective programmable artwork on Async Art. The surviving TXU project document identifies the participants as OficinasTK, Mattia Cuttini, ilan katin, Serste and BlackBox/Sparrow; a later public interview with Mattia Cuttini independently names his “digital family” for the work as Sparrow, XCOPY, OficinasTK, Serste and ilan katin. The restored Async gallery still preserves the work as **Master token ID 108**. The four totem-head layer bundles each contain one state by Serste: **SNK, HEN, FRL and SOL**.

The Async auction calendar preserved in Drive schedules the four layer bundles and the TXU.TOTEM Master in the March/April 2020 release cycle. The work belongs in Stelitano's sales history; however, no sufficiently reliable surviving source recovered in this audit states the realized sale price or Serena's share, so the monetary amount remains explicitly unresolved rather than reconstructed from memory. OpenSea's official Async Art editorial record also documents TXU.TOTEM as an early **autonomous artwork**, programmed to trigger day/night changes at 6AM and 6PM UTC.

Why it matters in the practice: TXU.TOTEM is an important bridge between DADA's collaborative authorship and Oracle's programmable participation. It combines collective creation, tokenized component ownership, state changes, automation and time-based behavior before Stelitano's later work with virtual environments and XR systems.

Public record: [restored Async Art gallery](#) · [OpenSea](#) / [Async Art](#) · [Tech-Art Talks interview](#)

Oracle, programmable fortune-teller

Period: 2020

Field: Programmable / phygital art system

Oracle is documented in the recovered portfolio research as a programmable artwork published on Async.art, structured around multiple controllable layers and a simple positive/negative response logic inspired by the Sibyl. A surviving 2020 “Three FAQ” document is indexed online under Serste. The Drive contains extensive contemporaneous/reconstructed project notes, but the canonical Async/Cent pages still need archival recovery before this case study is treated as fully externally verified. The project also extended into printable and physical derivatives, making Oracle an early phygital work as well as a programmable digital artwork.

Why it matters in the practice: Oracle is important less as an NFT object than as an early interactive system: artist, collectors and public participate in changing the state and meaning of the work.

Public record: <https://es.scribd.com/document/860309474/Oracle-programmable-fortune-teller-3faq>

CCIJ Rivers of Sewage / early immersive investigations

Period: 2022–2023

Field: Immersive journalism / spatial data storytelling

CCIJ’s public record states that from 2021 it transformed published investigations into interactive virtual exhibitions in Voxels and later Spatial. The 2023 launch statement says the XR exploration was spearheaded by Serena Stelitano. Spatial records and the project archive connect Rivers of Sewage and related immersive rooms to this period.

Why it matters in the practice: This is the point at which virtual-world design becomes a journalism method: narrative, data, photographs and reporting are organized as navigable spatial information.

Public record: <https://fij.ng/article/full-statement-ccij-launches-immersive-vr-exhibits/>

Dreadlocks and Discrimination

Period: 2023–2024

Field: Participatory 3D data visualization

VEZA describes the project as a virtual experience combining 3D data visualization and wearables in a participatory event. The page explicitly states that the Voxels experience was designed and built by CCIJ Metaverse Designer Serena Stelitano.

Why it matters in the practice: The project translates a conventional chart into an embodied multiplayer visualization: participants can become elements of the visualization through wearable objects, turning data interpretation into a social encounter.

Public record: <https://veza.news/dreadlocks-and-discrimination-vr/>

Democracy Deferred

Period: 2023–2024

Field: Investigative XR ecosystem

VEZA's Democracy Deferred project page lists Serena Stelitano under Metaverse Design, separately from Project Management, Design and Visuals, Data and Editorial roles. The investigation became the basis for later XR/game work.

Why it matters in the practice: The project is important as an ecosystem rather than a single environment: investigative reporting becomes the source for spatial, AR and game experiences while retaining separate editorial, data and design responsibilities.

Public record: <https://veza.news/investigative-series/democracy-deferred/>

Shield Your Vote

Period: 2023–2025

Field: AR/WebXR election-storytelling game

The Drive contains a dedicated assessment, development recaps and iterative documentation for Shield Your Vote. Public CCIJ material later identifies Shield Your Vote as the AR project from which the investigative Fortnite game evolved; CCIJ's IJF26 presentation publicly connects Stelitano to this immersive/game trajectory.

Why it matters in the practice: The working system combines AR scenes, information cards, 360-degree material, game interaction and wearable data visualization. It marks the transition from immersive exhibition to repeatable journalism-game framework.

Public record: <https://veza.news/investigative-series/democracy-deferred/>

Forest Is Life — Puddle Placer AR

Period: 2025

Field: WebXR / AR environmental data storytelling

VEZA's Forest Is Life investigation explains that Landsat-derived land-surface-temperature maps were used both scientifically and as the basis for an AR layer. Puddle Placer AR converts microclimates from the temperature-difference map into placeable environmental objects that readers can experience in their surroundings. The Drive contains a dedicated XR Puddle Placer methodology deck.

Why it matters in the practice: The project demonstrates a mature “data-to-experience” pipeline: satellite analysis -> continuous temperature surfaces -> narrative interpretation -> embedded WebXR/AR interaction.

Public record: <https://veza.news/article/2025/10/27/forest-is-life-but-nigerias-last-rainforest-is-falling-fast/>

The Data Vault Canyon

Period: 2025–2026

Field: Fortnite UEFN investigative journalism game

Data Vault Canyon is published as a Fortnite island by CCIJ. International Press Institute described it as a groundbreaking multiplayer journalism game and introduced Serena Stelitano as CCIJ Metaverse & Game Designer in a webinar about the game's worldbuilding. The Drive contains team updates, design documentation, development records and the broader Shield Your Vote/Data Vault evolution.

Why it matters in the practice: The project turns investigative-journalism problems into gameplay: players navigate a damaged newsroom environment, recover information and confront systems representing

intimidation, suppression and compromised data. The result extends XR journalism into a persistent multiplayer platform with retention and replayability concerns.

Public record: <https://www.fortnite.com/%40ccij/6120-3593-0647> · <https://www.linkedin.com/posts/international-press-institute-ipi-join-ipi-and-the-center-for-collaborative-activity-7399831994676953088-X26x>

7. Current title vs. public record

The 2026 portfolio supplied for this project positions Serena Stelitano as “Director, XR Products & Immersive Storytelling” and describes responsibility for XR product direction, immersive journalism, system architecture and published work across Fortnite UEFN, Voxels, Spatial, Zappar and WebXR. This is the preferred current positioning for the canonical personal site.

The external web record is slightly behind that positioning. CCIJ’s current About page indexed by search still lists “Metaverse Designer”; the 2023 institutional XR statement calls Stelitano the initiative’s leader; Democracy Deferred credits “Metaverse Design”; and International Press Institute later uses “CCIJ Metaverse & Game Designer.” The personal site should not erase these older titles. Instead it should show a dated role progression and link each public source, allowing search engines to reconcile the same person across changing job titles.

8. Method: what distinguishes the work

Method	Description
Translate evidence into spatial action	Investigative findings, datasets, photographs or environmental measurements are not merely displayed; they become environments, objects, mechanics or player decisions.
Design across platforms	Projects are structured across web articles, mobile AR, WebXR, virtual worlds and game platforms rather than treating each platform as an isolated output.
Use embodiment for data comprehension	Wearables, placeable objects, walkable rooms and playable systems make abstract data physically legible through position, scale, movement or role.
Preserve editorial provenance	The strongest projects retain clear separation between editorial, data, visual, project-management and XR roles, allowing immersive work to extend rather than obscure the reporting process.
Build for participation	From DADA visual conversation and programmable layers to multiplayer data visualization and Fortnite gameplay, participation is a recurring design principle.

9. Public authority and external validation

Source	What it supports	Use in SEO/public record
CCIJ About	Serena Stelitano listed as Metaverse Designer	Institutional identity
CCIJ/FIJ XR launch statement, 28 Sep 2023	XR initiative “spearheaded by Serena Stelitano”; Stelitano described as initiative leader	Leadership / XR
CCIJ Journalist Spotlight, 22 Apr 2024	Documents Serste identity, DADA, 2020 Voxels curation and CCIJ collaboration beginning in 2021	Career continuity
VEZA – Dreadlocks and Discrimination	Explicit “designed and built by CCIJ Metaverse Designer Serena Stelitano” credit	Design/build authorship
VEZA – Democracy Deferred	Metaverse Design: Serena Stelitano	Project credit
International Press Institute	Serena Stelitano: CCIJ Metaverse & Game Designer; Data Vault Canyon described as multiplayer journalism game	External professional recognition
DADA official GitHub repository	Serste identified as Serena Stelitano and recorded among Creeps & Weirdos artists	Early digital-art record
Forbes, 2018	DADA visual conversation identifies Serste (Italy)	Independent early coverage
VEZA – Forest Is Life	Publishes Puddle Placer AR methodology and experience	Published XR data project

Global circulation: Andrea Camilleri portrait (2016)

The 2016 literary portrait *Andrea Camilleri, cassatina sulla terrazza a Marinella* developed an independent editorial life after its open-license publication on Wikimedia Commons. A 2026 audit combining exact-title search, creator/alias search, filename variants and image-search queries found at least nine independently accessible external editorial or periodical republication contexts, plus four documented Italian Wikiquote uses. This is a minimum documented circulation, not a complete count of every historical reuse.

This matters to the public record because the work crossed from an individual illustration portfolio into journalism, literary criticism, reference publishing, academic/library media and international cultural periodicals, while preserving attribution either to Serena Stelitano or the historical Wikimedia handle SerStelitano.

Date	Publication / context	Use / attribution
2017-present	Italian Wikiquote — C’era una volta Vigata	Commons file reused on three content pages and one template; creator remains SerStelitano.
17 Jul 2019	CulturaMente	Embedded editorial copy using a site-hosted file derived from the Commons portrait; page links the image record to SerStelitano.
18 Jul 2019	La Voce di New York	English-language article image: “Andrea Camilleri eats ‘la cassatina’ (Wikimedia/ SerStelitano).”
18 Jul 2019	DRAGON / Los Arciniegas	International mirror/syndication of the La Voce article using the same credited image.
Oct 2019	Biblioteche oggi	Print/PDF journal credit gives the full work title, © SerStelitano, CC BY-SA 4.0, Wikimedia Commons.
2020	Treccani	Institutional editorial reuse: “Un ritratto di Andrea Camilleri”; image credit SerStelitano / CC BY-SA.
15 Mar 2021	Il Sole 24 Ore / Nòva100	Credits the canonical name: artwork by Serena Stelitano, full title and 2016 date.
2 Sep 2025	Culturalidentità	Centenary-era article credits SerStelitano, full work title and CC BY-SA 4.0.
7 Oct 2025	4U Magazine	Used as the cover image; explicit credit to Serena Stelitano and the full title. The article states it originated at yтали.
Dec 2025	Incontri — Periodico della Comunità degli Italiani	Bilingual Croatian/Italian periodical: “Ilustracija Andrea Camilleri, Serena Stelitano,” appearing in the Camilleri feature across the two language sections.

Publication implication. The dedicated work page should treat this as a circulation/provenance case study rather than a single portfolio image: canonical file, open-license history, republication timeline, selected screenshots/covers where rights permit, and structured links that resolve SerStelitano / SeLoPhlee to Serena Stelitano.

10. Recommended public web architecture

URL pattern	Purpose	Primary topic	Structured-data role
/serena-stelitano/	Canonical Person/Profile hub	Serena Stelitano — XR & Immersive Storytelling	ProfilePage + Person
/xr-immersive-storytelling/	Practice/method page	XR product direction, immersive storytelling, spatial media	WebPage
/immersive-journalism/	Topical authority page	Immersive journalism, XR journalism, investigative storytelling	WebPage
/work/dada-creeps-weirdos/	Case study	early blockchain-native collaborative art	CreativeWork
/work/oracle-programmable-fortune-teller/	Case study	programmable art, participatory systems	CreativeWork
/work/ccij-rivers-of-sewage-xr/	Case study	immersive investigation, Spatial/Voxels	CreativeWork
/work/dreadlocks-discrimination-vr/	Case study	3D data visualization, wearables	CreativeWork
/work/democracy-deferred-xr/	Case study	investigative XR ecosystem	CreativeWork
/work/shield-your-vote/	Flagship case study	AR game, election storytelling, wearable data	CreativeWork / SoftwareApplication if appropriate
/work/forest-is-life-puddle-placer-ar/	Flagship case study	WebXR, AR environmental data	CreativeWork
/work/data-vault-canyon/	Flagship case study	Fortnite UEFN journalism game	CreativeWork / VideoGame where appropriate
/archive/	Chronological archive	1996–2026 selected works	CollectionPage
/writing/	Articles, talks, research	XR journalism, digital art, AI/Web3	CollectionPage

11. On-page SEO package for the canonical profile

Element	Recommended copy
SEO title	Serena Stelitano — XR & Immersive Storytelling Immersive Journalism & Game Design
H1	Serena Stelitano — XR & Immersive Storytelling
Meta description	Serena Stelitano (Serste) directs XR products and immersive storytelling across investigative journalism, WebXR/AR, interactive data visualization, virtual worlds and Fortnite UEFN.
Opening entity sentence	Serena Stelitano, also known as Serste, is an Italian XR product director and immersive storyteller working across investigative journalism, interactive data visualization, WebXR/AR, spatial media and game-based storytelling.
Canonical sameAs priority	LinkedIn; CCIJ profile/About; Wikimedia Commons profile; DADA records; relevant Spatial profile; published project credits

Internal-link anchor vocabulary

- Serena Stelitano XR and immersive storytelling
- Serena Stelitano immersive journalism work
- Shield Your Vote XR journalism game
- Data Vault Canyon Fortnite journalism game
- Dreadlocks and Discrimination immersive data visualization
- Forest Is Life Puddle Placer AR
- DADA / Serste early collaborative digital art

Image SEO rules

- Use descriptive filenames, e.g. serena-stelitano-data-vault-canyon-fortnite-uefn.jpg rather than IMG_4021.jpg.
- Alt text should describe what is shown and identify Serena only where she is actually present or the image documents her credited work.
- Captions should include project name, year, role and platform when useful.
- Create dedicated image galleries only when the media adds evidence or design context; avoid thin image-only pages.

12. Structured data blueprint

The canonical profile should use ProfilePage + Person structured data. Project pages should link back to the same Person entity as creator, designer or contributor only where the credit is supportable. A simplified implementation blueprint follows; production markup should use the final canonical domain and only verified sameAs URLs.

```
{
"@context": "https://schema.org",
"@type": "ProfilePage",
"mainEntity": {
"@type": "Person",
"name": "Serena Stelitano",
"alternateName": ["Serste", "SeLoPhlee"],
"url": "https://YOUR-DOMAIN.example/serena-stelitano/",
"jobTitle": "Director, XR Products & Immersive Storytelling",
"knowsAbout": [
"Extended Reality (XR)", "Immersive storytelling", "Immersive journalism",

"https://www.linkedin.com/in/serena-stelitano",
"https://commons.wikimedia.org/wiki/User:SerStelitano"
]
}
}
```

13. Publication rules and evidence safety

- Publish external credits as citations/links, not as unsupported self-description.
- Date title changes instead of overwriting historical titles. This helps search engines reconcile role evolution.
- Do not publish internal CCIJ proposals, timesheets, budgets, private messages or unreleased mechanics unless explicitly cleared.
- For collaborative projects, name collaborators and preserve role boundaries wherever public credits exist.
- Use recovered Wix/archive material as provenance, but label it as archived/recovered if the original page no longer exists.
- For Oracle, recover or archive the original Async/Cent/MakersPlace pages before presenting a fully verified canonical case study.
- Bots Ridge and ICE Paperdoll DataViz should remain development records until a public release or authorized public description exists.

14. Publishing sequence

Order	Page	SEO/public-record function
1	Canonical Serena Stelitano profile	Creates the Person entity and disambiguates the name
2	Dreadlocks and Discrimination	Strong explicit authorship credit + exact XR/data-viz language
3	Shield Your Vote	Central bridge between investigative XR and game design
4	Data Vault Canyon	Strong external recognition + live Fortnite artifact
5	Forest Is Life / Puddle Placer AR	Strong current WebXR/data methodology
6	DADA / Creeps & Weirdos	Establishes long historical continuity in participatory digital culture
7	CCIJ immersive journalism / Rivers of Sewage	Establishes 2021–2023 XR journalism leadership
8	Democracy Deferred XR	Connects formal project credit to SYV/Data Vault lineage
9	Oracle	Publish once original source recovery is strengthened
10	Full archive 1996–2026	Provides depth without creating dozens of thin pages

15. Comprehensive work chronology, 1996–2026

The following index is derived from the working Web Record Master. It is an editorial map, not a claim that every item should receive a standalone page. Verification labels indicate the current evidence state in the master.

Period	Project / element	Area	Verification	Publish priority
1996–2001	Formazione artistica, catalogazione, diritto, economia	Formazione / catalogazione	Needs corroboration	C – grouped archive

17. Journalism training, certifications & writing skills

Stelitano's writing practice is supported by formal online journalism training through Michigan State University's School of Journalism, alongside sustained practical work in interviewing, long-form journalism, investigative and analytical writing, art writing, digital culture writing and XR journalism.

Journalism training & credentials

Credential	Provider	Documented scope	Public reference
Become a Journalist: Report the News! Specialization	Michigan State University - School of Journalism / Coursera	Professional journalism, ethics, newsgathering, interviewing, research, reporting, writing and multi-platform delivery. Listed in the 2026 CV.	https://www.coursera.org/specializations/become-a-journalist
Capstone: Create your own professional journalistic portfolio	Michigan State University - School of Journalism / Coursera	End-to-end professional news report: story concept, reporting, interviewing, research, compilation and portfolio production. Listed among Stelitano's LinkedIn credentials.	https://www.coursera.org/learn/become-a-journalist-capstone

Writing & editorial skills

- Journalism and journalistic writing
- Investigative journalism writing and research
- Reporting, interviewing and source development
- Long-form and feature writing
- Writing, editing and narrative structure
- XR journalism and immersive-journalism methodology writing
- Art writing and art-history writing
- Digital art, Web3 and digital-culture writing
- Critical, analytical and opinion writing
- Environmental, regenerative and agroecology writing
- Digital product, research-paper and technical narrative writing

18. Writing corpus

The corpus below separates authored writing from interviews and third-party profiles. It combines published work, recovered Cent-era writing and substantial manuscripts documented in the Drive. Items are described conservatively according to the source evidence currently available.

Journalism, investigative & XR writing

Year	Title	Writing field	Source / publication record	Status
2025	Truth & Dare: How Investigative Journalists Manage Trauma To Stay in the Profession	Long-form journalism / interviews	LinkedIn PDF; interview source files preserved in Drive	Published / public record
2026	Before the Public Enters: Deadlines, Contact Points, and the Workflow of XR Journalism	XR journalism / professional workflow essay	Authored manuscript in Drive	Publication-ready manuscript
2026	Disease X: Possible Futures After Mercosur	Analytical environmental / agroecology writing	LinkedIn / project regrò	Published / public record
2026	I 75 anni della Riforma e gli ecosistemi al collasso: il raccolto amaro della bonifica	Historical / ecological analysis	LinkedIn / i prodotti della Natura	Published / public record
2026	Woman or Wild Boar? A Minimal Handbook of Venatory Patriarchy	Ecofeminist / environmental essay	Draft in archive	Draft
2026	VEZA FurtherLayer - Product Narrative & Technical Background / Research Paper	Digital journalism product research / technical narrative	Drive research paper, product narrative and print edition	Research / product writing

Year	Title	Writing field	Source / publication record	Status
2019	Bodies in Summer	Art writing / cryptoart culture	Cent; recovered in portfolio master	Recovered archive
2020	People in my mind, part 1	Art/community portrait writing	Cent; recovered in portfolio master	Recovered archive
2020	Oracle, programmable fortune-teller: Intro	Digital art / programmable-art writing	Cent; recovered project record	Recovered archive
2020	Oracle, programmable fortune-teller: looking inside	Technical-conceptual essay on programmable art	Cent; recovered project record	Recovered archive
2020	Oracle - Three FAQ	Project explanation / digital art writing	Cent-era text; public copy survives online	Recovered + public copy
2020	Collecting Le Grand Tour	Art, collecting and project writing	Cent / archive	Recovered archive
2026	They Made You Hate NFTs. Then Used Your Art to Feed AI.	Opinion / digital art history / AI / Web3 / cataloguing	Authored manuscript in Drive; public LinkedIn publication record	Published / manuscript preserved

Authorship boundary: Interviews, profiles, academic studies and collaborative institutional documents that quote or discuss Stelitano are listed separately under public voice and external validation, not presented as authored writing. DADA's Invisible Economy materials are therefore not included in this authored corpus unless a specific Stelitano-authored section can be independently established.

19. Interviews, talks & public voice

Why this section matters. Search authority is strengthened when the public record contains not only credits but also Stelitano speaking in her own voice across different phases of the work. The sources below document a consistent philosophy: art as communication and collaboration; immersive systems as ways to make evidence explorable; and XR as a tool for making complex journalism more accessible and relatable.

	Date	Format	Source / appearance	What it documents	Useful quote / voice record	Philosophy signal	Public URL
	1 Jun 2018	Interview	DADA — The Art of Blockchain	Early philosophy of collaborative digital art	“DADA is not a showcase of an artist’s work. It is about collaboration and communication; the sale of the artworks is secondary.”	Collaboration precedes market value; the artwork is part of a social communication system.	https://powerdada.medium.com/
	17 Apr 2019	Research interview	Copenhagen Business School — A New Era for Digital Art	37m44s primary interview used in an academic thesis on blockchain art platforms	No short quote reproduced here; retain the interview as a primary-source record.	Documents Stelitano as an early participant thinking about authorship, platform value, provenance and digital art economies before the XR period.	https://research-api.cbs.dk/ws/p/59793786/635025_Masters_The
	23 Dec 2022	Podcast interview / voice	Transparency Talks	Interviewed as Metaverse Designer at CCIJ; discussion includes what the metaverse is and her path into the medium.	Podcast episode: Serena Stelitano, 19m51s.	Useful voice record for the transition from digital art and virtual exhibition practice into CCIJ metaverse/XR work.	https://creators.spotify.com/pod
	28 Sep 2023	Institutional statement / quoted voice	CCIJ statement republished by FIJ	Public explanation of the CCIJ XR initiative, with Stelitano identified as the initiative leader.	“VR and AR technology offer an entirely new dimension to journalism.”	XR is not decoration around reporting; it changes the dimensionality of access to narrative, data and photographic evidence.	https://fij.ng/article/full-statement
	28 Sep 2023	Institutional statement / quoted voice	CCIJ statement republished by FIJ	Stelitano describes the civic purpose of XR journalism.	“With XR, we can make complex issues accessible and relatable to a wider audience.”	Accessibility, empathy and comprehension are treated as product goals of immersive journalism.	https://fij.ng/article/full-statement

Date	Format	Source / appearance	What it documents	Useful quote / voice record	Philosophy signal	Public URL
22 Apr 2024	Profile interview	CCIJ Journalist Spotlight – Serena Stelitano	Career interview linking classical art, cryptoart, virtual curation and the CCIJ XR practice.	Use the page primarily as interview/ context evidence rather than lifting long quotations.	Supports continuity: the current XR practice grows out of visual art, cataloguing, collaborative digital culture and virtual-world building.	https://www.linkedin.com/pulse/
3 Dec 2025	Webinar / public presentation	International Press Institute – Virtual Newsroom Visit	Stelitano appears with the CCIJ team to present Data Vault Canyon and the worldbuilding process behind the Fortnite journalism game.	Public appearance; no quotation reproduced in this master.	Marks the move from virtual exhibitions and AR into game-based investigative storytelling and product/world design.	https://www.linkedin.com/posts/
Apr 2026	Conference / public appearance	International Journalism Festival, Perugia	Stelitano joins CCIJ in a public conversation on games and interactive ideas for investigative journalism.	Public appearance; no quotation reproduced in this master.	Positions games as a legitimate mass-audience interface for serious reporting, not as a separate entertainment layer.	https://de.linkedin.com/company

Philosophy across the record. Across the 2018 DADA interview and the 2023 XR statement, the same principle persists: the medium matters when it increases communication, participation and comprehension. The later journalism work extends that principle from collaborative drawing to spatial evidence, embodied data, AR layers and playable systems. This continuity should be visible on the public site because it explains why Stelitano’s practice is not a sequence of unrelated technologies but a long-form investigation into how people enter, share and act within information environments.

20. Provenance, networks & public footprint

Curatorial purpose. Stelitano’s practice is distributed across artworks, programmable systems, NFT marketplaces, virtual land, hybrid exhibitions, game environments, journalism products and platform-native communities. This ledger treats transactions, marketplace records, token ownership, spatial

permissions, build bounties and public platform counters as part of the material history of the practice. It deliberately separates **sale, payout, royalty, listing, mint, transfer, holding and project-level revenue**.

On-chain identity, sales history & confirmed proceeds

The canonical EVM wallet documented across the archive is **serste.eth**, [0x20dA165deB81dBB042fE4A9d4808399eF2477c5d](#). The same address is visible across Ethereum and current multichain portfolio records. At the August 2026 snapshot, the address has current balances on **Ethereum, Polygon, Optimism and Base**; the NEAR identity **serste.near** is documented separately in the Createbase/ Mintbase ecosystem.

Record	Status / verified figure	Evidence	Interpretation boundary
DADA Collectible -> serste.eth, 16 Mar 2021	5.2402 ETH	Ethereum transaction	Confirmed direct art-related contract payout. It remains the minimum monetary amount that can currently be aggregated without inference.
TXU.TOTEM	Master #108 ; collective sale history included; four layer bundles and Master scheduled in Async auction cycle	Async restoration · preserved Async auction schedule · external attribution	The work is no longer omitted from sales history. Realized sale price and Serena's share remain unresolved, so no ETH amount is invented.
Oracle, programmable fortune-teller	Async master + seven collector-controlled Sybil leaf layers + autonomous Apollo layer	Oracle - Three FAQ	Project and mechanics verified; historical master/layer prices still need TokenSale-level reconstruction.
MakersPlace / Great Mother breath	Official July 2020 MakersPlace newsletter names <i>Great Mother breath - gif art by Serste</i> among works recently collected by featured collectors.	MakersPlace newsletter	Confirms collector activity / a collected Serste work; surviving editorial record does not state the individual price.
Oracle - Cards on MakersPlace	31 items currently surfaced with Collectors and Activity records	MakersPlace collection mirror	Item count is not the number sold; exact proceeds remain unresolved.
KnownOrigin	Historical Serste creator profile linked to canonical wallet	KnownOrigin artist address	Creator identity is independently corroborated; sales total unresolved.
1stDibs NFT - Tryptic of the self	3 × 1/1 works; 0.33 ETH reserve each; accepting bids	Serste profile	Current listings, not sales; reserve prices are excluded from proceeds.

Sales methodology. The verified **5.2402 ETH** is a conservative minimum of directly attributable, monetized Ethereum art proceeds, not a lifetime sales total. TXU.TOTEM, MakersPlace collector activity, Oracle, KnownOrigin and other historical marketplace records are preserved even when their realized monetary values cannot yet be reconstructed. This avoids the opposite errors of omitting genuine sales history or fabricating a total from incomplete marketplace interfaces.

Cross-chain & marketplace audit

Network / marketplace	Verified Serste record	Sales classification
Ethereum / DADA	Creeps & Weirdos participation; canonical DADA contract; 5.2402 ETH direct contract payout verified.	Confirmed monetized provenance.
Ethereum / Async Art	TXU.TOTEM Master #108; Oracle master/layers; autonomous programmable-art practice.	Historical sales/auction record exists; exact TXU/Oracle realized amounts unresolved.
Ethereum / MakersPlace	Serste appears among MakersPlace's early creators in 2018; <i>Great Mother breath</i> is documented as collected in 2020; Oracle Cards survive as a 31-item collection record.	Collector/sale evidence verified; exact proceeds unresolved.
Ethereum / KnownOrigin	Historical Serste profile tied to the canonical wallet.	Creator record verified; exact sales ledger unresolved.
OpenSea	Official OpenSea/Async article preserves TXU.TOTEM's autonomous behavior and links the Async marketplace; wrapped DADA infrastructure also circulated through OpenSea.	No complete wallet-level OpenSea export was recovered; therefore no unsupported current item or sales total is stated.
Polygon	Verifiable NFT activity on serste.eth includes GLITCH EP8/EP9 mints to the wallet and a Womptron Wearable ERC-1155 transfer.	These audited transactions are mints/holdings/transfers, not Serena sales ; no matched payment + authorship evidence was found.
Optimism / Base	The canonical EVM address has current balances on both chains.	Cross-chain wallet presence only; no Serena-authored art sale verified in this audit.
NEAR / Mintbase	serste.near, Createbase build economy, Andrea Grows NFT publishing and milestone payouts.	Non-EVM sales/funding/payout history is reported separately below.
Rarible / Foundation / SuperRare / Objkt-Tezos	Searches found curatorial, collaborator or social traces but no sufficiently verified Serena-authored sale record.	Excluded from personal sales until a token, creator account or payment can be verified.

Polygon is retained because it documents genuine cross-chain activity. For example, GLITCH EP8 token IDs 266, 270 and 279 and GLITCH EP9 token IDs 56 and 110 were minted from the null address to serste.eth; Womptron Wearable token 13 was later transferred out at zero POL value. Those events demonstrate wallet participation but are intentionally not transformed into authorship or revenue claims.

TXU.TOTEM: token structure & Serste states

Async component	Serste state	Archive status
OVM · SNK · ERH · SNK · RBB	SNK	Scheduled 12:00 in preserved Async auction calendar
IDL · MNK · WTR · HEN · FOX	HEN	Scheduled 12:30
LPS · GDS · FIR · FRL · SPD	FRL	Scheduled 13:00
NGR · SKL · WND · SOL · CRW	SOL	Scheduled 13:30
TXU.TOTEM Master	Collective master	Scheduled 14:00; restored Async Master token ID 108

The TXU working document identifies five contributors and explains the logic of four visible “heads” selected from five participant states. OpenSea/Async later documented TXU.TOTEM as one of the early autonomous works that changed automatically with the UTC day/night cycle. This is therefore not only market provenance but a technical precedent for Stelitano’s later interest in systems whose state changes through participation, time and external logic.

Voxels / Cryptovoxels: parcels, permissions & build history

Current parcel metadata provides unusually strong evidence because collaborator permissions are part of the parcel record itself. At the August 2026 research snapshot, three parcels directly list **Serste** as collaborator.

Parcel	Token / location	Role	Current raw visits	Evidence
Center for Collaborative Investigative Journalism (CCIJ)	#4304 · 5 Via Pattari, Milan	Collaborator / builder	14,197	Voxels parcel
Mintbase Showroom	#1342 · 1 Codec Throughway, Little Tokyo	Collaborator / builder	28,600	Voxels parcel
Park Teleport	#2358 · 1 Grim Lane, Moon	Collaborator; project context still unresolved	6,447	Voxels parcel

These three currently verifiable collaborator parcels carry **49,244 combined raw visit counters**. This is a platform-footprint indicator, not unique visitors or Serena-only traffic.

The record is broader than current collaborator permissions. **bottega di Serste** remains a current place on Chronos; the archive also preserves the February 2020 *CryptoVoxels_Serste_Courtesy* folder with *My Collection*, *Connection* and *Utopias*. The 2020 exhibition *The Pagans and their Rites* is preserved as curatorial/build use of ArtbyMLO’s space, not land ownership.

NEAR, Createbase & Mintbase: paid builds and hybrid infrastructure

Project / record	Documented work	Verified amount / metric	Evidence
Createbase Metaverse Builder Profile	Serste publicly enters the builder pool, citing NFT(Kitties)LAB and prior virtual-gallery work.	Builder record, 27 Mar 2021	NEAR Forum
NFT(Kitties)LAB · BARK BERLIN GALLERY	Cryptovoxels exhibition built by Serste and Iota; documented rooftop, terrace and bar.	19 hours; 110 NEAR team-build payout approved	Createbase bounty
Riva Taylor first NFT exhibition	One-room Cryptovoxels exhibition with music, album artwork and bar. Createbase explicitly refers other builders to “Serste’s notion sheet”.	95N bounty headline; personal payout not independently resolved	Createbase bounty
Wildeverse / Wilde Möhre	Physical-virtual festival environment connecting festival infrastructure with Cryptovoxels and Somnium Space.	Mintbase explicitly credits the Cryptovoxels environment as built by Serste.	Mintbase
Andrea Grows	Interactive webcomic + NFT + QR-linked physical collector box and regenerative-agriculture publishing system.	\$1,000 equivalent approved funding framework; 23.15 NEAR milestone payout documented in March 2022; B/W NFT listed at 15 NEAR.	NEAR Forum · Mintbase

The NEAR record documents an early open builder economy where spatial design, DAO proposals, NFT publishing, Notion-led art direction, physical objects and virtual exhibition infrastructure formed one workflow rather than separate disciplines.

Hybrid exhibition impact: Rare Effect & Wildeverse

Rare Effect Vol. 1. Keyko identifies Serste as the creative builder who modeled the CryptoVoxels gallery after Lisbon’s Arroz Estúdios. The preserved event report records 39 NFTs, 15 exhibiting artists, 35 live acts and 14 talks. For the ten-day February 2021 programme it reports **500K+ total reach, 20K+ virtual attendance, \$27K NFT sales, \$12K patrons and 120 active community members**, and states that the gallery was the **most visited parcel on Cryptovoxels during the 10 days**. These are project-level impact figures, not Serena’s personal sales.

Wildeverse. Mintbase describes the Wilde Möhre festival as attracting around 5,000 people. Createbase’s June report records the Wildeverse contract at **87 minters, 631 transactions and 359 NEAR earned**; the preparatory VR event series featured **26 artist talks and 9 music/performance sets**. Again, these are ecosystem/event metrics attached to an environment whose Cryptovoxels build is directly credited to Serste.

Spatial: published environments & public footprint

The public bottega di Serste Spatial profile currently yields a minimum of **17 known public spaces** carrying **3,274 combined raw view counters**. Twelve known CCIJ-related spaces account for **2,713 raw view counters**. These are platform counters, not unique people.

Selected / CCIJ-related Spatial space	Current raw views	Public credit / context
The CCIJ ROS VR project	628	Built by The CCIJ Design Team/Serste
Rivers Of Sewage	465	CCIJ investigative environment
Not the kind of life a human being should live	344	Built by The CCIJ Design Team/Serste
The CCIJ Hub	248	Access point to the CCIJ XR and Web3 layer
Living in a 'critical state'	200	Built by The CCIJ Design Team/Serste
21/02/2024 - The CCIJ PL Sessions	184	Professional Learning environment
Immersive Data Room: Operating and Planned Direct Potable Reuse Projects	135	Immersive data environment
Walk the Data - two separately published versions	106 + 201	Rivers of Sewage data environments; preserved separately pending platform-history audit
Ship at Sea - Building data sets to tell powerful stories	97	Built by The CCIJ Design Team/Serste
05/09/2024 - The CCIJ PL Sessions	71	Professional Learning environment
The CCIJ PL Sessions at the Data Viz Meetup	34	Professional Learning / data visualization

Other known bottega di Serste spaces include the studio itself (125 views), regrò cryptoart exhibition (114), Rose Climb (201), Claudia Padrón Solo Exhibition (95) and Desert Studio (26). Snapshot dates should accompany totals because platform counters continue to change.

Publication rules for the catalogue raisonné

- **Sale:** requires a marketplace/contract record or artist confirmation; if monetary amount is unavailable, the sale is retained with "amount unresolved".
- **Personal proceeds:** only transactions or payouts directly attributable to Serena/Serste are aggregated.
- **Team payouts:** shown as team/project compensation, never silently converted into personal income.
- **Listing:** reserve/asking prices are not sales.
- **Mint / holding / transfer:** proves chain participation, not authorship or revenue.
- **Project economics:** event NFT sales, contract earnings and patron funding remain project-level metrics.
- **Platform metrics:** Voxels visits and Spatial views remain raw counters, not unique people.
- **Historical evidence:** Drive reports, auction schedules, Notion/Createbase references and archived marketplace/editorial records are preserved when live interfaces have disappeared.

This provenance layer functions as the monograph's scholarly apparatus: it documents not only what Stelitano made, but how works were owned, changed, sold, circulated, built into environments, funded and remembered across changing digital infrastructures.

22. Source dossier used for this master

Alias evidence boundary: Wikimedia verifies the Camilleri work, its date and SerStelitano authorship.

SeLoPhlee is the historical artistic alias/signature identified by the artist for that work; the same spelling is preserved on Wikimedia as a previous social handle.

This master was assembled from: (1) the 2026 portfolio supplied by Serena Stelitano, which presents the current professional positioning and selected case studies; (2) the Web Record Master spreadsheet containing 99 work records and evidence-status fields; (3) connected Google Drive records used to establish chronology and development context; and (4) public web sources listed above. The 2026 portfolio should be treated as an editorial/self-authored source, while external credits and institutional records provide independent or first-party corroboration.

Before publishing the final website version, each factual case-study page should receive a final source check, rights review for images/screenshots, canonical URL assignment and structured-data validation.
